HAZUS-MH APPLICATION: HURRICANE WIND

Design Level Exceedence – Peak Gust Wind Speeds: Hurricane Katrina

POTENTIAL USES Identify countie

- Identify counties with the highest probability of sustaining residential damage from wind.
- Identify and quantify manufactured housing sites and other vulnerable structures – by county.
- Identify counties that likely will require Individual Assistance, including home repair and rental assistance.

Confidence Level in Analysis: Moderate to High

DATA AND ANALYSIS DISPLAYED:

Areas where peak gust wind speeds exceeded the ASCE building design level
